

Before DigitalVision

After DigitalVision!

APPLICATIONS

- Manufacturers, Distributors and Constructors: Engineering Drawings, Reports
- Healthcare Providers, Hospitals: Medical forms
- Law: Legal papers
- Universities, Schools: Student Records, Forms
- Government: Paper Forms
- Human Resources: Consent forms, Paper Trail

Electronic Document Management System

By

PowerVision Corporation

- Are you buried under a mountain of paper?
- Do you often get lost in the maze of file cabinets full of documents?
- Are you storing paper documents to satisfy regulatory requirements?
- Are you paying the price for lost or missing documents?
- Would you like to free up the storage space taken by archived documents?

Would you like to have all these documents at your fingertip without any of the problems listed above?

PowerVision's **DigitalVision** architecture is the answer to an organization's ever demanding and increasing requirements to convert paper documents and to manage, track, file and retrieve valuable digital assets and electronic content. Using a component-based, building-block approach, **DigitalVision** delivers the foundation to design and implement a tailored, integrated solution, with the following benefits:

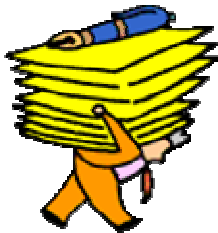

- Instant and ubiquitous access to the information
- Storage space savings
- Information retention and preservation
- Information distribution and configuration control

HIGHLIGHTS

- ❑ **Secure** access from anywhere, any time of day
- ❑ Documents are indexed and cataloged in a relational database for quick search
- ❑ Variety of modules available: Buy only the ones you need
- ❑ Secure transactions
- ❑ Integration with existing data in legacy systems – real-time or batch updates, you decide
- ❑ Customized user interface
- ❑ Robust reconciliation and transaction reporting
- ❑ E-mail interface

The modular nature of **DigitalVision** allows it to be customized to your specific needs. As a turnkey solution, we include all necessary services, hardware, and software to achieve the digital workflow, conversion, and archiving objectives of any digitization/archive project. Our turnkey approach provides the optimal and efficient deployment and you can realize the savings immediately. The modular, web-based access mechanism makes **DigitalVision** an ideal candidate both as an intranet portal and as a farmed out Web service. Alternatively, each block in the integrated solution is available separately, or in any combination. Our solution offers a significant opportunity to provide flexible implementation alternatives for each customer's current and future needs.

DigitalVision can archive objects in any format, including drawings, maps, photos, documents, news clips, cards, forms in print, microfilm, microfiche, slides and negative formats, and electronic text, digital images, video and audio. The system addresses a variety of requirements including color or black and white, diagram cleanup and de-spackling, vectorization, OCR, etc. As the system supports a variety of viewers for different types of objects, we can deploy a customized system with your own branding quickly and efficiently.
